Introducing

DIAGRAM!™

A graphics tool for people who think and draw at the same time.

Introducing

DIAGRAM!

Wouldn't it be great if your drawing tool worked with you rather than against you? If it automated a lot of really mundane drawing tasks, like redrawing lines or maintaining connections between objects?

Better yet, how would you like to draw a diagram and attach voice-overs, or reference files from your favorite applications? So a simple double-click would replay a presentation or bring up a supporting spreadsheet or other document?

Well, Lighthouse Design presents the answer to this wish list: Diagram!™

Diagram! is a flexible graphics tool for NeXT™ computers, designed to simplify drawing and presenting diagrams of any nature.

For the NeXT user, Diagram! offers a series of innovative and convenient features:

- Rubberbanding Lines
  Most drawing applications don't understand the meaning of a connection: a line between two objects. Diagram! does, and maintains these lines even when the symbols they connect are moved or modified–spelling an end to tedious redrawing.
- Links to All Applications
  For those situations in which your diagrams don't tell the whole story, Diagram! supports links to spreadsheets, word processors–all other NeXT applications. And by adding voice annotation, you can deliver a presentation without actually being there.
- Symbol Palettes
  Diagrams tend to use multiple copies of the same or slightly different symbols. To simplify symbol storage and retrieval, Diagram! allows you to build custom symbol palettes. Copy any symbol to a palette once, then tear off as many copies as you like.

Of course, Diagram! also provides a complete drawing tool, with gridding, grouping, zooming, layering and alignment–everything you'll need to develop high quality presentations or simple charts.

The following pages offer a few examples of Diagram! in action.

Price: $249.00

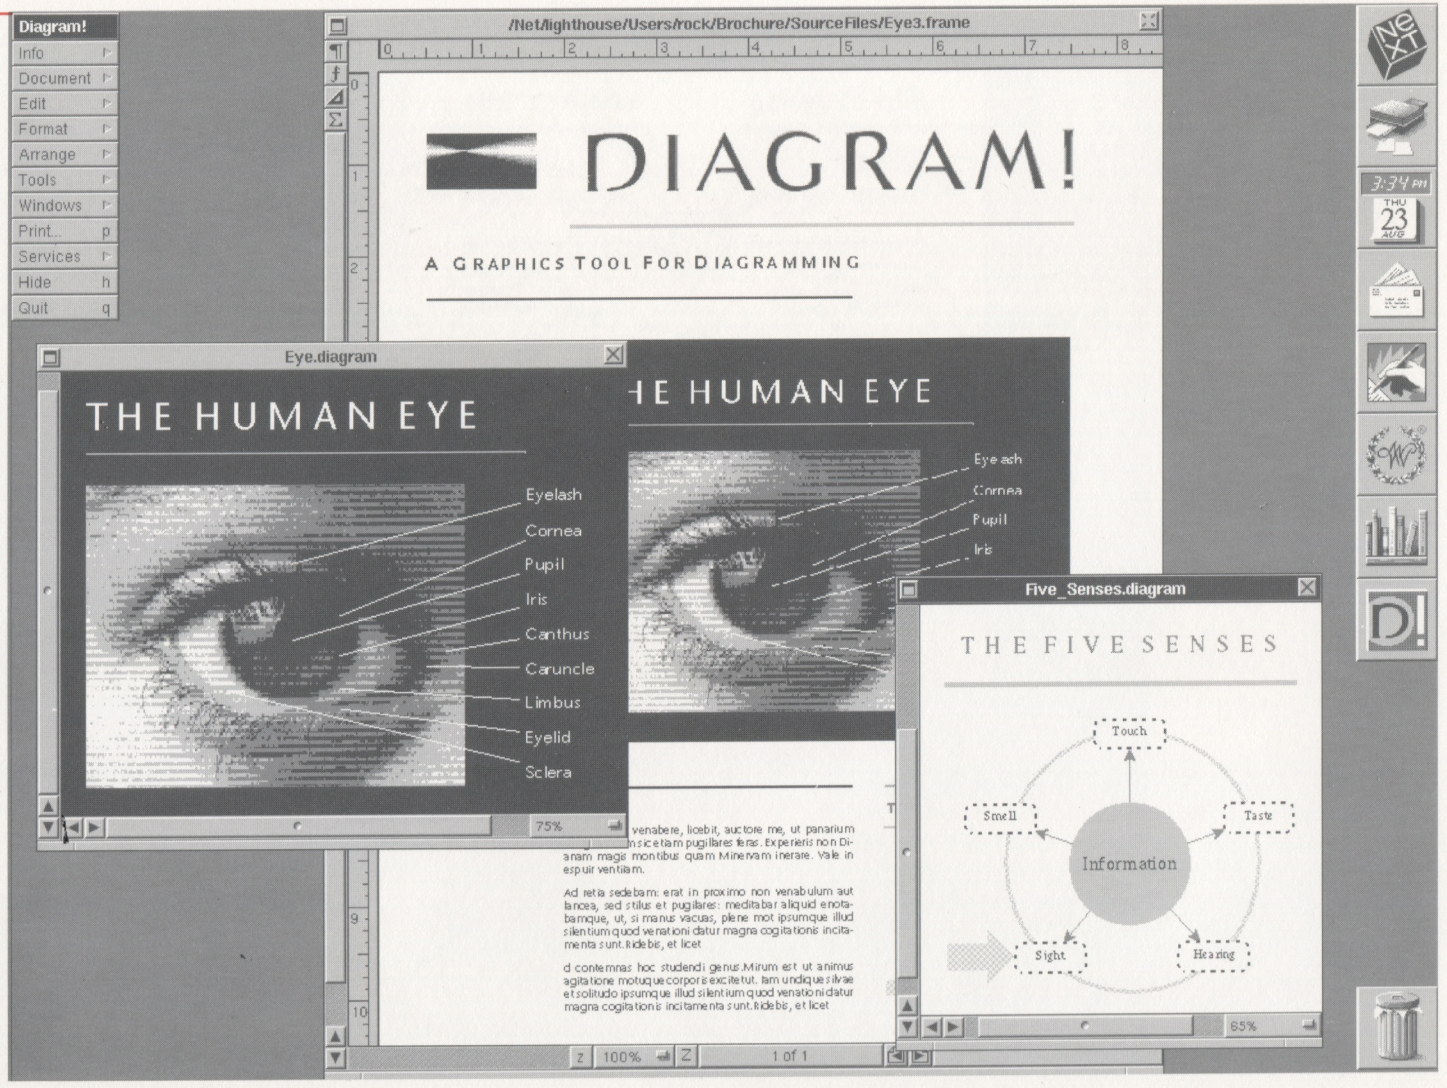
For desktop publishers, Diagram! provides all the tools to create presentation quality diagrams and annotated illustrations.

Choose from a variety of standard symbols, or drag in your own from free-hand illustration tools or Clip Art collections. Then use these images as parts of your diagram, or annotate them with labels that remember placement and location (shown).

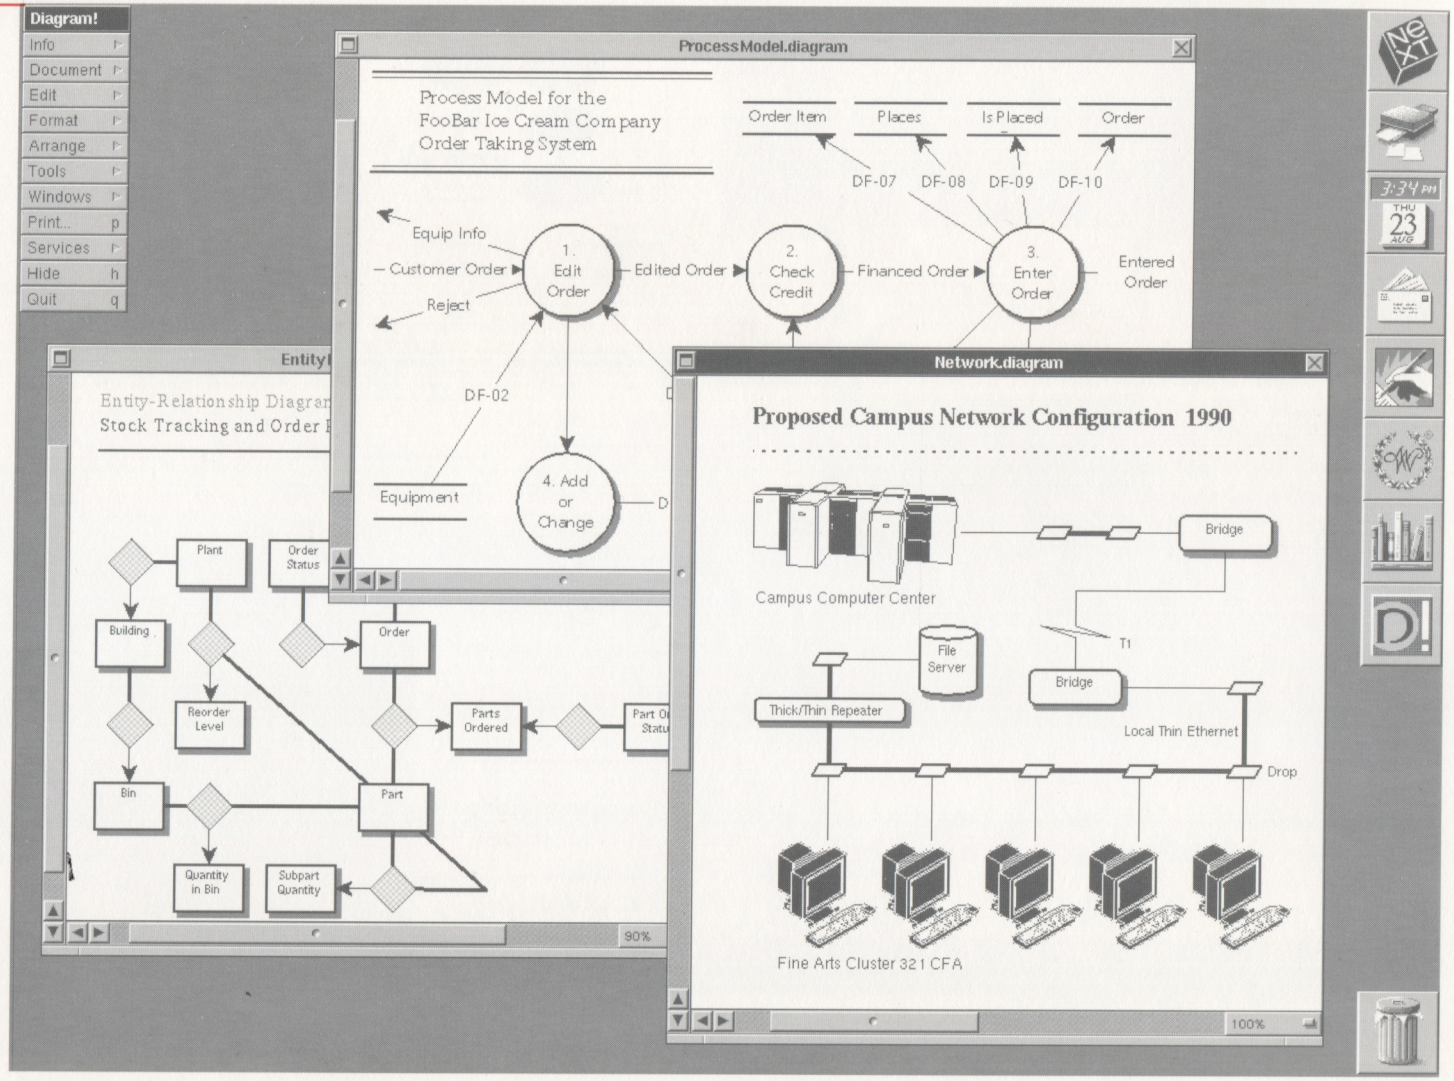
From there, just copy and paste between Diagram! and your favorite desktop publishing or page layout programs.



Engineers, scientists and technical publishers will find Diagram! excellent for drawing:

- Entity Relationship Diagrams
- Network Models
- Dataflow Diagrams
- Data Structure Diagrams
- Class Hierarchy Diagrams
- and many other CASE and structure diagrams

Diagram!'s link feature supports hierarchical diagrams, and allows you to attach source code, technical specs or any other data to Diagram! objects.



Diagram! provides a desktop whiteboard for the business user. It's perfect for getting thoughts and ideas on paper, as well as drawing:

- Process and Flow Charts
- Decision Trees
- Organization Charts
- and many other Business Graphics

With Diagram!'s Link feature you can attach spreadsheets, memos or any other files to objects in your diagram.

And convenient voice annotation lets your presentation do the talking.
